

PHIFER

Aluminum Insect Screening

Black Aluminum Screen

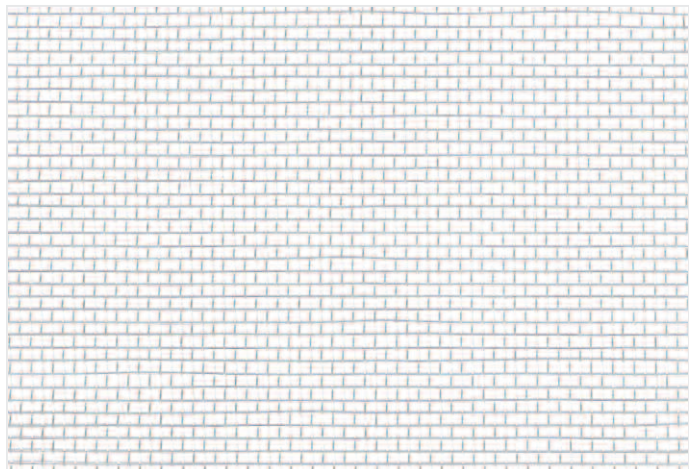

■ Black Aluminum Screen offers the best outward visibility available in an aluminum insect screening product. Produced with Phifer's electrodeposition paint system, Black Aluminum screen has a premium coating that is durable and has excellent weathering characteristics. This is the consumer's first choice for the best exterior view.

Black

Brite Aluminum Screen

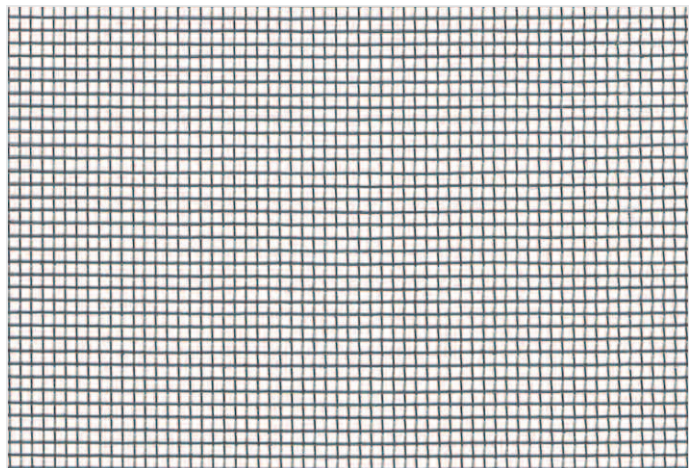

■ Brite Aluminum Screen is the traditional screening product of the fenestration markets. The finish is uniform and makes for easy fabrication into window, door, and porch applications.

Brite

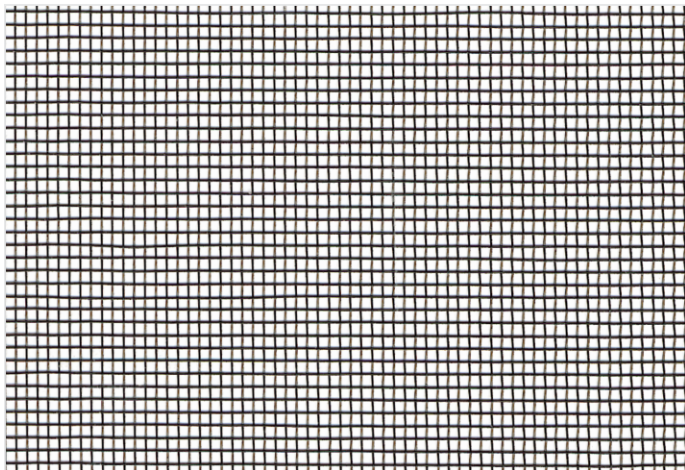

Charcoal Aluminum Screen

■ Charcoal Aluminum Screen is coated with a rich charcoal finish in Phifer's electrodeposition paint system. The glare is reduced by the dark color, which improves the outward visibility. The consistent finish of the screen gives it an architect-pleasing appearance.
